## Wheel Chocks

The New Canada Signal Wheel Chocks have been designed for all rubber tired mining equipment to endure the Canadian North.

The 280 Series wheel chock has been specifically designed for equipment up to and including 280 tons. The special Polyurethane Construction will stand up to the coldest climate conditions in the Canadian North. The special design will allow the rubber tired unit to power over the wheel chock yet hold the rubber tired unit securely in place at idle. A special Anti-Skid Strips are used on the bottoms of the Wheel Chocks to prevent the Wheel Chock from Skidding away from the tire.

Engraving for Identification on the Wheel Chocks are available on request.

Optional mounting bracket is available for this wheel chock for holding up to 4 Wheel Chocks.

Available in sizes for 35 ton to 280 ton.

**Another Quality Product from Canada Signal Company Inc.**
