## ATV Visibility Whip

The new **ATV Visibility Whip** is a revolutionary design to produce a well lighted Whip with Flag which incorporates materials to protect the Rider of All Terrain Vehicles and Snowmobiles.

Using Polycarbonate Materials, Polyolefin Heat Shrink, Foam Ball and Weatherproof Flag Material, this **Visibility Whip** has been designed to soften the impact of a regular fibreglass whip from whipping the operator.

The Polycarbonate Tubing with the Foam Ball can literally “Whack” the Operator with only the feeling that you have been hit but without any injury or pain to the operator of the All Terrain Vehicle or Snowmobile.

The base of the **Visibility Whip** uses an internal base spring and heat shrink which can withstand catching tree branches and bushes in normal operating use.

We have tested the **Visibility Whip** in unit roll over conditions in soft ground and the **Visibility Whip** had survived, however we recommend that you do not try this.

Clearly a better way to be seen.

**Another Quality Product from Canada Signal Company Inc.**
